

Scope of Services

CTA Buses have installed at the factory, a Cummins Engine and related engine components to power the engine. All CTA buses currently have a Cummins engine in the current fleet. In order to maintain the CTA bus fleet, CTA has worked with vendor Cummins, Inc. over the last 15 years to perform warranty work on our buses. Cummins, Inc. is located at 7145 Santa Fe Drive, Hodgkins, IL 60525. Cummins Inc. is the sole distributor and is authorized to perform warranty and non-warranty repairs on Cummins engines and engine related equipment in the Midwest Region.

This is a renewal and mirror of contract B18OP00554 for Cummins. The contract provides for contingency repairs when Cummins and CTA mutually determine that the repair is not covered under warranty and is a minor repair. Once an engine or related engine component is partially disassembled before determining that the repair does not qualify for warranty, it is only prudent for Cummins to complete the minor repair at that point in time.
